This is what our "complete" fastener catalog would look like...

if we had one!

We are often asked by fastener users to send them our complete catalog.

It just isn't practical to offer one. It would be *voluminous!*

After all we handle many special items in addition to standard sizes from .06" to several inches in diameter.

Add to that the numerous head styles, such as flat, oval, binding, pan, round, truss, hex, slot hex, washer, button, etc. With varying prices depending on availability and amount of material used.

Then there are the different drives available with prices varying according to popularity and availability. These include hex socket, square, phillips, slotted, torx, one way and combination square and phillips.

Not to be forgotten are the many different

materials available with frequently fluctuating prices.

You get the idea?

Actually, as a fastener distributor we function as *your universal catalog.*

It is our job to research the industry, locate and form liaisons with quality fastener manufacturers, and act as a reliable conduit to these sources to fulfill your needs for corrosion resistant fasteners.

Next time you have a specific fastener requirement, don't bother to search around for a bulky, cumbersome catalog.

**Just Call or Email!**

We'll do the searching and get back to you promptly with a good price.

What could be more **convenient?**
